About FSB

1881

FSB was established in 1881. Together with a modest workforce, company founder Franz Schneider produced antique-style brass cabinet fittings.

1920s

In the early 1920s, the first door and window fittings appeared in the FSB production program. The design of these years echoed the modernism of the Bauhaus era. Silver metal components were combined with black composite features.

1950s

Beginning with in-house designer Johannes Potente in the 1950s, FSB created the first handles which exemplify minimalism, modernism and ergonomics. FSB is still known for the use of these design principles today.

Four of Potente's lever designs have been included in the permanent collection of the Museum of Modern Art (MoMA).

1990s

Inspired by an international design workshop held in Brakel in 1986, FSB began engaging the market with contemporary designs in an initiative dubbed "Tour d'Europe." Throughout this initiative FSB created design suites with such renowned designers as Philippe Starck, Jasper Morrison, Richard Rogers and many others.

For the past two decades, FSB has continued to work with Architects and Designers to create handles – each with their own personality.

2000s

FSB introduces a limited range of levers supplied in complete locksets to the American design community. The first catalog was approximately 80 pages. Two later catalogs increased FSB's North American offering to nearly 100 lever designs.

In 2007, FSB expanded the North American distribution center, moving it to Madison, CT, where the majority of products are stocked in natural anodized aluminum and satin stainless steel. Stock items can be shipped in 48 hours. All non-stock items can be shipped within two to eight weeks regardless of the product type, finish or project size.

This is FSB's fourth edition for the North American market. It represents a huge step forward to offer a complete program which brings design consistency across more openings and applications.

This catalog is separated into different sections, tailored to your specific needs.

METRIC® in Detail

METRIC Bathroom Accessories

The bathroom is increasingly becoming a place for tranquillity and relaxation. As a result, notions of how such spaces are designed are having to be re-considered too. The concept of “atmosphere” has begun to play an ever more important part alongside purely functional requirements.

Factors such as “naturalness”, “simplicity” and “feeling good” are setting new standards both in the domestic sphere and in hotels and public areas. Growing significance attaches in the process to the selection and combination of natural materials, finishes and colours.

FSB is echoing this trend in the design of its METRIC bathroom accessory series.

The design principle is based on a minimal rectangular post centered on a small round escutcheon. METRIC’s looks are consciously understated, being defined by geometric forms and premium materials. The stylistic contrast between round roses and rectangular-section supports is a thematic thread that runs through the entire series. The combination of the two simultaneously underscores the crisp structuring of the system’s constituent parts.

Its astutely balanced proportions have a soothing effect and blend harmoniously with a variety of design concepts.

Ergonomic criteria have been taken into account wherever they are an aid to fluent sequences of movements. The holder for the toothbrush glass, for instance, tilts towards the user in a manner that facilitates the act of removing the glass.

New Products

Sliding Door Hardware

Building owners are demanding more efficient use of space.

In recognition of this trend FSB has developed an entire range of flush mounted trim for passage, privacy and entry sliding and pocket doors.

Bronze

There is an increase in an “old meets new aesthetic”.

FSB now introduces Bronze as a new material for selected lever handles and accessories.

Glass Door Hardware

Creating more open spaces has become a cornerstone of modern architecture.

FSB has broadened its glass door program to include exposed rolling gears for sliding glass doors.

Material and Finishes

METRIC is supplied in stainless steel. As well as being aesthetically pleasing, stainless steel exudes an authenticity that combines particularly well with natural materials such as wood and granite and makes it a firm contender for inclusion in quality bathroom schemes.

This dependable material has a justifiable reputation for being serviceable, corrosion-resistant, easy to look after and durable.

The quality with which FSB works stainless steel is the upshot of many decades of experience gained from producing well-designed, superlatively engineered hardware for doors and windows.

We have now applied this proficiency in design and manufacture to the METRIC bathroom accessory series.

Natural grip

Sturdiness in the diagonal

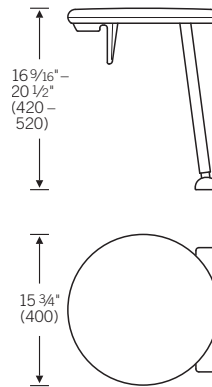

Numerous companies have done studies confirming the ergonomic advantages of an oval cross section versus a round one.

The advantages of an oval are particularly pronounced when the bar is intended to support the weight of the person gripping it. FSB has demonstrated the advantages of the oval cross section successfully in both door handles and pulls for years.

We are excited to introduce this design element to the bathroom.

METRIC®
Bathroom Accessories

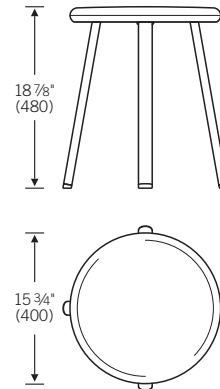

8241

- Stainless Steel (Frame)
- PUR (Seat)

Bath stool with rotating seat

The height-adjustable bath stool with rotating seat is designed with comfort in mind.

Propped up against the edge of the bath, it makes getting into the bath easier. Further bathroom functions such as body care or getting dressed/undressed are likewise facilitated.

8243

- Stainless Steel (Frame)
- PUR (Seat)

Free-standing bath stool with rotating seat

The free-standing stool has a rotating seat and is very convenient in the bathroom and for getting dressed/undressed.

8241

FSB convenience stool in pleasant-on-the-skin, hygienic PUR and stainless steel, with rotating seat in PUR, Ø 400 mm, seat height-adjustable from 420 mm to 520 mm, max. loading 150 kg, for propping against the edge of the bath and, in combination with FSB bath seat, can be used as an aid to moving and getting in the bath.

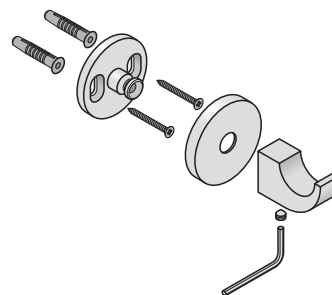

8243

FSB free-standing and convenience stool in pleasant-on-the-skin, hygienic PUR and stainless steel, with rotating seat in PUR, Ø 400 mm, seat height 480 mm, with four free-standing feet in stainless steel.

Fixing

The base rose (wall mounting) contains two parallel slots for optimum positioning and is screwed to the wall using the fixing material supplied. The cover rose is then pressed home and the pattern aligned as required.

Final visual adjustment of the functional components is performed by firmly tightening the hexagon socket screw against the tensioning bolt.
